A/UX 3.0: Requires MultiFinder to Run Macintosh Applications

```

Article Last Updated:

TOPIC -----------------------------------------------------------

Is it possible (and supported) to run individual Macintosh Toolbox off-
the-shelf applications under A/UX 3.0 WITHOUT launching 7.0 MultiFinder?
In other words, will A/UX 3.0 support A/UX 1.1 functionality, allowing me
to launch individual applications from the command line, and return to the
command line after I quit each application?

DISCUSSION ------------------------------------------------------

A/UX 3.0 doesn't allow Macintosh applications to run without MultiFinder.
System 7 relies on the existence of MultiFinder.
