## A/UX and Macintosh OS Coexistence (4/95)

Article Created: 9 November 1990

Article Last Reviewed/Updated: 26 April 1995

TOPIC -----

I thought A/UX and Macintosh OS could coexist.

DISCUSSION -----

They can. Both operating systems exist on the same physical disk. To switch operating systems, restart the Macintosh.

Macintosh applications can be run under the A/UX Finder: a Mac OS environment running on top of A/UX. Further, A/UX applications can be written to look like Macintosh applications if they use the A/UX Toolbox, with windows, icons, and so on.
