A/UX: The network unreachable Remote Mount Error (8/94)

Article Created: 29 October 1990
Article Reviewed/Updated: 25 August 1994

TOPIC ---

I tried to mount a remote file system and got the error:

    network unreachable

DISCUSSION --

This could be because the Ethernet card or cable connection is not working
correctly. Here are four troubleshooting steps:

1) Make sure that the Ethernet cable from the Ethernet card to the rest of
   the network is connected and seated properly and snugly.

2) Check that there is not a broken connection in the main network cable
   itself.

3) Check that cables do not show any physical signs of damage. Ethernet
   cables should not be crimped, bent, or squished.

4) Replaced all cables that show excessive wear.
