A/UX: AppleTalk Can Use Enet Port Instead of LocalTalk (8/94)

Article Created: 18 November 1991
Article Reviewed/Updated: 30 August 1994

TOPIC ---

How can I make AppleTalk use the Ethernet port instead of the LocalTalk port?

DISCUSSION ---

AppleTalk for A/UX is configured via the /etc/appletalkrc file. The interface
entry defines if you use EtherTalk or LocalTalk. Follow these steps:

1) Use AppleTalk -d to bring the AppleTalk services down.

2) Change the appletalkrc file to reflect what you want.

3) Bring the services up with appletalk -u.

4) If you're in a Finder session, you must log out and log in again to
   see the changes.
