A/UX: The rwhod Daemon Increases Network Traffic (9/94)

Article Created: 8 June 1988
Article Reviewed/Updated: 19 September 1994

TOPIC ---

The "rwhod" daemon ("in.rwhod" in A/UX) maintains the database used by
the "rwho" and "ruptime" programs.

DISCUSSION --

Doing this causes a lot of network traffic. Approximately every 60 seconds the
daemon broadcasts and queries the state of each system (host) on the network.
This action is network intensive (meaning the network response time becomes
slower) on an already user-loaded network.

Suggestion: If you have a heavily loaded network and system performance
is a concern, turn off the "in.rwhod" daemon. Note: The output of "rwho"
and "ruptime" commands is meaningless if "in.rwhod" is not running.
