A/UX: Visual Editor Set To TextEditor (8/93)

Article Created: 3 August 1993

TOPIC ---

I'm using A/UX 3.0 and I'm having problems using the visual editor feature
of mailx. In my .mailrc file, I have:

    set VISUAL=/mac/bin/TextEditor

When creating a mail message, using mailx, I issue the "~v" command, and
TextEditor comes up, showing a filename of /tmp/Re####, where #### is some
random number. After typing some text, I save it, and then get the
following error message: "Can't write onto file 'Re####' with an okay
button." When I quit, I get a "save changes?" dialog, but I still get the
same error. I have plenty of free disk space on "/" when this is
occurring. Any suggestions as to what is going wrong?

DISCUSSION --

We are able to reproduce this problem in A/UX 3.0, it's a TextEditor bug in
A/UX 3.0. However, it worked under A/UX 3.0.1 and an Apple Workgroup
Server (AWS) 95.

We suggest you upgrade to A/UX 3.0.1.
