Retrospect A/UX: Browser Options (8/93)

Article Created: 16 August 1993

TOPIC -----

This article describes the browser options in Retrospect A/UX.

DISCUSSION -----

Retrospect A/UX browser options

Retrospect browsers showing the contents of A/UX volumes and StorageSets provide an additional view option: Display A/UX information.

When a browser is displayed, the Get Info command shows A/UX-specific information and includes node numbers for any multiply-linked files. In addition, the browser's Cross Reference command allows you to find all of the files that are linked to the highlighted file or files. See Chapter 6, "Customizing Backups," in the Retrospect User's Guide for more information on using browsers.

For further information on working with Retrospect and Retrospect A/UX, search the Tech Info Library by "Retrospect" or "Remote."
