AppleWorks: Using With Wide Carriage ImageWriter

This article last reviewed: 28 September 1987

AppleWorks can print over the entire width of the Wide Carriage ImageWriter's platen. How you do it depends on whether you're using AppleWorks' word processor, database, or spreadsheet module:

- In the word processor or spreadsheet, press Open-Apple-O, set PW (platen width) to 13.2, and press Escape.
- In the database, press Open-Apple-O when in a Report Format and set PW (Platen Width) to 13.2.

To print the maximum number of characters per line, change the Characters per Inch setting to 17. This allows up to 224 characters per line.
