## Dow Jones Portfolio Evaluator and Apple Modem

DJPE does not support the Apple Modem as far as autodial. If the software finds a Super Serial Card, it automatically goes to a manual dial mode. From the terminal mode, type the commands for the modem to dial, and then manually log on. After that, type CTRL-G (for go), and the software will operate normally from then on. No revision is planned for either of the Dow Jones packages.
