Pascal: Pascal Turnkey

Create a Pascal Turnkey system by transferring the desired program code to the boot diskette and changing its name to System.Startup. When no file by that name is present on the boot volume, the system defaults to the command line.

To execute the System.Startup code from the command line, type X (for execute), and then

```
SYSTEM.STARTUP.
```

The final period prevents the operating system from appending the .CODE suffix to the file name before trying to execute it.
