## Apple Pascal 1.3: Info On Remote Start-up

This article last reviewed: 22 January 1988

It is possible to set up a network so as to start up Apple IIs over the
network using Apple Pascal.

The Pascal 1.3 manual contains useful information concerning the Pascal boot
process: basically, if the network card looks like a disk controller, and
adheres to the ProDOS firmware standards (that is, ProDOS compatible without
drivers), then this is very possible. (By the way, you need a multi-user
license to run Pascal this way.)
