Printing from Visicalc III

The driver file on the Visicalc III diskette is set up with two drivers:
.PRINTER, which is the default printer driving the Silentype, and .QUME, the
driver for the RS-232 port. Two ways to get output to the Qume are:

    A. Use the System Configuration Program to rename the existing .PRINTER to
       .SILENTYPE, then rename .QUME to .PRINTER.

    B. Send the information to the printer as if it were a file.

For the Silentype: For the Qume:

     /P   /P
      P   F
                                              .QUME

Then enter the lower right coordinate of the part of the worksheet you want
printed.
