DOS Compatibility Card: Emulating Two-Button Mouse (5/96)

Article Created: 2 December 1993

Article Reviewed/Updated: 20 May 1996

TOPIC -----

How can I perform Window functions that require a two-button mouse with my Macintosh DOS Compatibility Card?

DISCUSSION -----

The DOS Compatibility Card software emulates the two-button mouse on all versions of the DOS Compatibility Card. You must use the keyboard in conjunction with the Macintosh mouse to emulate the second mouse button.

The = key (equal sign key) on the keypad acts as the second mouse button.

Position the mouse and hit the = key. To click with both buttons, press the mouse button and the = key at the same time.

Article Change History:

20 May 1996 - Revised to include all versions of DOS Compatibility Card.

05 May 1994 - Removed references to Houdini.
