Article Last Updated:

TOPIC -----

Can we install AppleTalk Remote Access from a hard disk and/or over the network instead of from the floppy disk? We've tried but have been largely unsuccessful.

DISCUSSION -----

One 1.44MB Disk

Here's how you create a "Net Install" version of AppleTalk Remote Access from one 1.44MB disk:

- 1) Create a folder called "ATRA Net Install" on your Macintosh hard drive.
- 2) Insert the AppleTalk Remote Access Installer disk.
- 3) Drag the floppy disk icon on top of the "ATRA Net Install" folder icon. This will create a folder called "Installer" within the "ATRA Net Install" folder and a copy of the contents of the floppy to the "Installer" folder.
- 4) Open the "ATRA Net Install" folder.
- 5) Open the "Installer" folder.
- 6) Change the name of the application inside from "Installer" to "Install"
- 7) Drag the files "Install" and "Remote Access Script" out of the "Installer" folder, to the root level of the "ATRA Net Install" folder.

Two 800K Disks

Here's how you create a "Net Install" version of AppleTalk Remote Access from two 800K disks:

- 1) Create a folder called "ATRA Net Install" on your Macintosh hard drive.
- 2) Insert the AppleTalk Remote Access Installer Disk 1.
- 3) Drag the floppy disk icon on top of the "ATRA Net Install" folder icon. This creates a folder called "Installer Disk 1" within the "ATRA Net Install" folder and a copy of the contents of the floppy to the "Installer Disk 1" folder.
- 4) Insert the AppleTalk Remote Access Installer Disk 2.
- 5) Drag the floppy disk icon on top of the "ATRA Net Install" folder icon. This creates a folder called "Installer Disk 2" within the "ATRA Net Install" folder and a copy of the contents of the floppy to the "Installer Disk 2" folder.
- 6) Open the "ATRA Net Install" folder.
- 7) Open the "Installer Disk 1" folder.
- 8) Drag the files "Installer" and "Remote Access Script" out of the "Installer Disk 1" folder, to the root level of the "ATRA Net Install" folder.
