AppleShare 3.0: How to Remove and Return to System 7

Article Created: 4 December 1992

TOPIC -----

How do I remove AppleShare 3.0 from my Macintosh and return it to System 7?

DISCUSSION -----

- 1) Remove the Users & Groups data file from the Preferences folder and restart.
- 2) Insert the AppleShare File Server disk in the drive and double-click the Installer.
- 3) Choose Customize.
- 4) Select items to remove. You can remove these individually or all at once depending on which you select:
 - AppleShare File Server (v3.0)
 - AppleShare Print Server (v3.0)
 - Apple II Setup (v2.1.3)
 - AppleShare Workstation (v3.0)
- 5) Hold down the Option key, and when the Install button becomes the REMOVE button, click on it.
- 6) Restart the computer.
- 7) The system creates a new Users & Groups data file. If you want to return to the data file you used before installing AppleShare 3.0, copy the original System 7 data file to the Preferences folder from a backup (the AppleShare 3.0 Users & Groups data file won't work).

Here's a list of the files automatically removed:

- AppleShare File Server
- AppleShare Print Server
- File Server Extension
- IWEm

There are three other files that aren't removed that you can remove manually:

- AppleShare Log (loose in System Folder)

- File Server Folder (in Preferences folder)
- AppleShare Print Server Folder (in Preferences folder)
