TOPIC -----------------------------------------------------------

Is Apple's Ethernet cabling self-terminated?

If I don't use Apple cabling, but use thin Ethernet cabling instead, will I
need a terminator at the end of my network?

DISCUSSION ------------------------------------------------------

Apple's new Ethernet cabling is self-terminating, so you don't need to
terminate both ends of your Ethernet backbone.

If you use thin Ethernet cabling, you need to place a terminator at both
ends of the network.
