## X.25 to LocalTalk: Performance Degradation

This article last reviewed: 25 September 1989

TOPIC -----

Are there any performance degradations when transmitting from a X.25 network to Localtalk?

DISCUSSION -----

LocalTalk speed is a factor of 4 to 100 times FASTER than X.25 speeds. LocalTalk is 230.4Kbps, whereas most X.25 access lines are 2400 to 19,200bps, with a maximum of 64Kbps. Therefore, going from a LocalTalk to X.25 link will show lower "performance" than LocalTalk to LocalTalk. Copyright 1989 Apple Computer, Inc.
