ABS Tech Note: DAL09 Disk Space Usage on VAX/VMS (6/92)

Article Created: 30 June 1992

TOPIC ---

This technical note describes user disk space considerations for DAL
VAX/VMS Servers.

DISCUSSION --

DAL client users must have some disk space on the host server machine to
run the DAL Server. When the user's host account has zero available blocks
on the account's default physical disk, a DAL error message is generated
during any data exchange request. The error message reads: "Error Creating
Object."

If DAL user accounts are set up without default disk space, the system
administrator can specify an alternative location for the DAL server to
find (and use) free disk by defining the VMS logical CL1TEMPDIR.

This variable should be defined to the name of a directory, such as
USER:[TEMP].

The DAL user must have read/write and delete permission for the directory.
