Apple Workgroup Server 95: AppleTalk Version Info (7/93)

Article Created: 12 July 1993

TOPIC ---

This article describes Apple Workgroup Server (AWS) 95 AppleTalk version
information.

DISCUSSION --

The AWS 95 running A/UX 3.0.1 will report that it is running AppleTalk
version 56 when queried by applications such as Inter•Poll. AppleTalk
version 56 is Phase 2 compliant, is fully compatible with, and can coexist
on an extended AppleTalk network with devices running versions 53 or later
of AppleTalk. All versions of AppleTalk running on devices located on
LocalTalk based (non-extended networks) are completely compatible with, and
can inter-operate with, the AWS 95.

The AppleTalk driver used in the AWS 95 is an A/UX based device driver.
Installing a Macintosh OS based AppleTalk driver into the System Folder of
an AWS 95 will not update the AppleTalk version.
