A/UX or AWS 95: Starting From Install CD-ROM (8/95)
Article Created: 18 August 1995

TOPIC -------------------------------------------------------------

What files and information are needed to boot from the Installation CD-ROM? I
would like to configure my MacPartition to boot my installer CD-ROM if
necessary. I also want to know how to properly configure my floppy drive.

DISCUSSION --------------------------------------------------------

The boot floppy used to startup from the CD-ROM is different from your
MacPartition in three ways:

• The extensions folder of the system folder contains a file "CD hack"

• The disk level contains a A/UX startup document called "boot_CD"

• The Preferences Booting dialog box in A/UX startup are configured:
  - Automatically boot at startup, is selected.
  - Autorecovery is set for "boot_cd -d" as custom command.
  - Autolaunch is set for shutdown.

NOTE: The A/UX installer startup is slightly different than the A/UX startup
application, however, A/UX startup does support booting from CD-ROM.
