Apple RAID: No Custom Icons After Volume Restore (6/96)

Article Created: 15 November 1994
Article Reviewed/Updated: 7 June 1996

TOPIC ---

While setting up Apple RAID, I first backed up my volumes, re-initialized my
drives with Apple RAID, and then restored the volumes. Now all of the custom
icons I had before are now generic icons, and I can't paste them back when using
the Get Info window. I get the following error message, "The command could no be
completed, because it cannot be found." How do I get my custom icons back?

DISCUSSION ---

If you use the volume restore instead of the restore to a folder in Retrospect,
the invisible 'Icon' file with the custom icon gets removed and your drives.

You should use the "Retrieve files and folders" command instead of the "Restore
Entire Disk" command in Retrospect.

The error you describe can also occur if you try to paste a custom icon on a
volume icon.

To restore your custom icons, use ResEdit or some other resource utility, make
an "Icon" file visible from another drive and, as a precaution, duplicate it.
Copy the duplicate file to the Apple RAID drive. When the copy is complete, use
ResEdit or other resource utility to make both the original and copied files
invisible again (the Icon file must be invisible). Restart, and you should be
able to create a custom icon.
