DAL for AWS 95: DALInstall Requires 'whoami' (12/93)

```
Article Created: 13 December 1993

TOPIC ------------------------------------------------------------

I have DAL 1.4 for the Apple Workgroup Server (AWS) 95.  I am trying to
install DAL and have it work with Oracle 7.   I have followed the
instructions, creating the directories, and so on, and then run DALInstall.
I get the following error message: DALInstall: whoami not found.

Do you know what is the problem?  Do you have any suggestions?

DISCUSSION -------------------------------------------------------

AAWS 95 installation does not install 'whoami' automatically.  The
instructions for installing DAL 1.4 on the AWS 95 did not include the
information about installing 'whoami'.  Once you install 'whoami'
everything will work fine.  We will forward this information for inclusion
in the DALInstall instructions.
