AWS 95: Workaround for Date Corruption Problem (11/94)

Article Created: 2 November 1994

TOPIC ---

I'm experiencing a problem with my Apple Workgroup Server (AWS) 95 and
Retrospect where the date gets changed to the year 2017. Is there any known
workaround until this problem is really fixed?

DISCUSSION --

This problem is fixed with Tune-up 2.0, and we recommend installing it.

You may also try the following:

1) Reset the system clock (General cp will work for this).

2) Delete Retrospect scripts and rebuild them. You may need to delete the
   entire Retrospect folder (/mac/sys/System Folder/Preferences
   /Retrospect). The problem is not with Retrospect, but if Retrospect
   runs subsequent to the date shift, the script files are tainted by the
   wrong date.

3) You may want to resave any files with 2017 dates. Retrospect still
   backs them up, but the date information is still disconcerting in the
   Finder.
