## Internet Service Providers In Europe (4/95)

Article Created: 11 April 1995

TOPIC -----

This article provides a list of Internet service providers in Europe.

DISCUSSION -----

Internet Service Common Terms

=====

Below are some terms and definitions to common Internet terms and connection methods:

- Shell

Offers a basic connection running on top of an UNIX environment. Services include electronic mail, Usenet news, FTP, telnet, gopher, IRC, and so on. Most providers have a menu-driven interface as well.

- UUCP

Offers a method for computers to transfer files from machine to machine without user intervention.

- SLIP

Allows computers to be temporarily connected the Internet. You can run services such as FTP and telnet directly from a computer. This also allows you to run some of the popular graphical user interface software (such as Mosaic and other World Wide Web clients).

- PPP

Similar to SLIP but a much better protocol.

- FTP

Offers anonymous FTP space.

- LAN

This is for connecting a local area network to the Internet.

- WWW

Offers space for maintaining Web pages.

- ISDN

High-speed network connections that are offered as dial-up access via digital modems.

- 56-T1

These cover the 56K through T3 speeds. These are dedicated line connections that are high-speed and high-bandwidth.

## Internet Service Providers

=====

Internet Service Providers in your local area connect you to an Internet account through a regular phone line. This list is not complete, and should not be considered a recommendation from Apple Computer. It is provided for your reference.
