AppleTalk On AWS 95: Cannot Upgraded With NSI 1.5 (5/95)

Article Created: 3 May 1995

TOPIC ---

We recently looked at a client's Apple Workgroup Server (AWS) 95 and found it is
running AppleTalk version 56, while the other servers and computers at the site
had AppleTalk version 58. Is there any reason not to upgrade the AWS 95 to
AppleTalk 58?

Is the process of upgrading the AWS 95 to AppleTalk version 58 any different
than on a standard Macintosh?

DISCUSSION ---

Do NOT try to install the latest Mac OS version of AppleTalk from the Network
Software Installer (NSI) 1.5 as it is not compatible with A/UX. The AWS 95 uses
a special version of AppleTalk, which is designed to run on A/UX. The version
will report version 56 when polled, however it is compatible with the latest
AppleTalk version 58.
