BNET Networking module patch May 13, 1995

This module replaces the existing bnet networking module for A/UX releases 3.1 and 3.1.1. It should not be used with previous releases.

This module has the following functionality changes
----
1) Fixes a problem in the TCP/IP code that could cause crashes under high load conditions when a remote machine times out a connection.

2) Adds support for traceroute.

To install
----
1) Copy the existing file "/etc/boot.d/bnet" file to a safe place

2) Put 'bnet' into /etc/boot.d

3) Run 'newconfig' (with no arguments) as root

4) Reboot the system
