AppleShare: Move File to Different Folder, Creates Copy (4/96)

Article Created: 22 April 1996
Article Reviewed/Updated: 25 April 1996

TOPIC ---

With AppleShare 4.1 on a Workgroup Server 8150/110, when I logon as a user, a
file is copied when moved between two folders on the same volume. When I logon
as the administrator, or in front of the server computer, the file is moved, not
copied.

DISCUSSION --

This happens because as a user, you do not have access priviliges necessary to
move the file. You can do one of the following:

• Place the folders inside a single shared folder the user has See Folders, See
Files, and Make Changes priviliges. You should now be able to move the file
rather than copy it.

• Give the user Make Changes priviliges to the volume, or to additional
folders.
