IBM 3151 ASCII Display Station Family

This article last reviewed: 26 May 1989

This product line was introduced in June, 1988. These ASCII displays augment the already existing line of 316X ASCII displays. The model 310 and 410 feature plug in cartridges to implement optional terminal emulators and features, such as RS422A. 3708 enhancement mode allows pass through printing as a local or system printer to a display attached ASCII printer by seizing two LU's from the 3708 remote protocol converter. Three models are offered. The following table summarizes the features of each model.
