ARA 2.0 MultiPort Server: A/ROSE Extension Is Necessary (9/94)

Article Created: 28 September 1994

TOPIC --

My Apple Remote Access 2.0 MultiPort Server comes up fine but I cannot configure
my Serial card. What is wrong?

DISCUSSION --

You do not have the A/ROSE extension installed. A/ROSE is the Apple Real-Time
Operating System, and It's used to download the Remote Access Server software
into memory on the Apple Serial NB Card. The serial card has its own 68000 CPU
to off load the communication task from the Macintosh computer's CPU.
