## Macintosh II: NuBus Power Consumption Specifications

Article Created: 13 January 1988  
Article Last Reviewed: 21 July 1992  
Article Last Updated:

TOPIC -----

Macintosh users have asked about Macintosh II maximum power consumption per slot.

DISCUSSION -----

The maximum recommended current limits for NuBus cards are described on page 6-5 of "Designing Cards and Drivers for Macintosh II and Macintosh SE" (ISBN #0-201-19256.)

These limits provide for the following NuBus card current draw:

- 5V at 2.0a
- 12V at .175a
- 12V at .1a

The total wattage is 13.3 per slot, including an internal hard disk and two floppy drives.
