Macintosh Display Card 24AC: Compatibility With Power Macintosh

Article Created: 4 April 1994

Article Reviewed/Updated: 18 April 1994

TOPIC -----

I installed the Macintosh Display Card 24AC software on my Power Macintosh but it gives me an error that the board can not be used in accelerated mode.

Is the card and software compatible with the Power Macintosh?

DISCUSSION -----

The Macintosh Display Card 24AC and its software are fully compatible with the Power Macintosh beginning with revision 1.2 of the software.

Earlier versions of the 24AC software currently did not support accelerated operation on Power Macintosh computers.
