MACINTOSH PROCESSOR UPGRADE:

The follow gestalt identifiers are used by the Macintosh Processor Upgrade, when installed in an eligible 68LC040-based system. When the card is active, the following gestalt identifiers are used:

```
gestaltPowerMac475      =104;      { Power Macintosh 475/605 }
gestaltPowerMac575      =105;      { Power Macintosh 575 }
gestaltPowerMac630      =106;      { Power Macintosh 630 }
gestaltPowerMac580      =107;      { Power Macintosh 580 }
```

POWER MACINTOSH UPGRADE CARD:

The following gestalt identifiers are used by the Power Macintosh upgrade card, when installed into an eligible 040-based system. When the card is active, the following gestalt identifiers are used:

```
gestaltPowerMac700      =116;      { Power Macintosh 700 }
gestaltPowerMac900      =117;      { Power Macintosh 900 }
gestaltPowerMac950      =118;      { Power Macintosh 950 }
gestaltPowerMacC610     =119;      { Power Macintosh C610 }
gestaltPowerMacC650     =120;      { Power Macintosh C650 }
gestaltPowerMacQ610     =121;      { Power Macintosh Q610 }
gestaltPowerMacQ650     =122;      { Power Macintosh Q650 }
gestaltPowerMac800      =123;      { Power Macintosh 800 }
```

Gestalt

This Note now documents *_Gestalt* selectors and return values added since the release of Inside Macintosh Volume VI. Please note that this is supplemental information; for the complete description of *_Gestalt* and its use, please refer to Inside Macintosh Volume VI.

The Macintosh LC II is identical to the Macintosh LC except for the presence of an MC68030 processor, so under System 7.0.1 it returns the same *gestaltMachineType* response as the Macintosh LC (that is, 19). However, under System 7.1 and later, the LC II responds to a *gestaltMachineType* selector with the value 37. Thus, there are two cases when you are on an LC II: under System 7.0.1, you will get a *gestaltMachineType* response of *gestaltMacLC* (19), but *gestaltProcessorType* will return *gestalt68030*; under future system software, *gestaltMachineType* will return *gestaltMacLCII* (37). The processor will, of course, still be a 68030.

There is a similar difficulty with the PowerBook 145. This is essentially a PowerBook 140 with a 25-MHz 68030 processor. Under System 7.0.1, it returns the *gestaltMachineType* response of *gestaltPowerBook140* (25); under System 7.1 and all later system software versions, the value returned is *gestaltPowerBook145* (54).

Performa computers have the same *gestaltMachineType* resources as their Macintosh counterparts.

Developers are reminded that the `gestaltMachineType` selector is for informational purposes only and should not be used as a basis for programmatic decisions. As always, developers are encouraged to test for the specific features they need and not to rely on any particular machine having a particular set of features.

Note: The Macintosh PowerBook 100 Developer Notes and the Macintosh PowerBook 140/170 Developer Notes, available from APDA and on the Developer CD Series disc and AppleLink, incorrectly document `gestaltMachineType` response values for the Macintosh PowerBook computers. The above values are, and have always been, the correct values.
