Macintosh 630 Family: No Built-in Portrait Display Support 9/94

Article Created: 2 September 1994

TOPIC -----

Can I use the Apple Portrait Display with a Macintosh Quadra 630 computer?

DISCUSSION -----

None of the Macintosh 630 family computers provide onboard video support for the Apple Portrait Display. In order to support the Apple Portrait Display you need a separate display card. The Macintosh 630 family computers have an LC style PDS slot, so Apple's Portrait Display Card will not work in this computer. However, if a third party video card supports the LC style PDS slot and the Portrait Display, it should work.

The Portrait Display resolution is 640 pixels horizontal by 870 pixels vertical.

The following computers are in the Macintosh 630 family: Performa 630, Performa 635, Performa 636, Performa 637, Performa 638, LC 630, and Quadra 630.
