Apple Portrait Display: Macintosh SE Card

This article last reviewed: 5 September 1989

TOPIC ---------------------------------------

Does anyone make a card to connect the Apple Portrait Display to a
Macintosh SE?

DISCUSSION ---------------------------------

RasterOps makes a card called the Clearview APD for the Macintosh SE that
drives an Apple Portrait Display. The board is also an accelerator running a
68000 at 16 MHz. Includes a socket for a 68881 math coprocessor. ("APD" stands
for "Apple Portrait Display.")

For more information, search on "RasterOps" in the Tech Info library.
