## Macintosh SE: SE/30 Upgrade Changes Function of Command-Shift-4

Article Created: 13 August 1991  
Article Last Reviewed: 6 August 1992

### TOPIC -----

I've upgraded my Macintosh SE to a Macintosh SE/30. Command-Shift-4 with Caps Lock up used to print the active window. Now it form-feeds one sheet of blank paper on my ImageWriter II.

How do I print the active window on a Macintosh SE/30?

### DISCUSSION -----

The screen dump of the active window was discontinued in System 6.X for any system newer than the Macintosh SE.

However, holding down Command-Shift-Caps Lock-4 should give you a screen dump of the desktop, including any active windows.
