Megaphone: Answers Calls When Computers Are Asleep (12/96)

Article Created: 6 December 1996

TOPIC --

If a Macintosh Performa 6360 or 6400 series computer is set to Sleep (from the
Special menu or through Energy Saver), will Megaphone still answer calls?

DISCUSSION ---

Yes, provided that Megaphone is open, Megaphone will wake up the computer and
answer the call; the hard drive spins up to allow Megaphone to record the
message. Also, for more reliable performance, verify that Megaphone is set to be
the front-most application when the telephone rings.

To do this using Megaphone 2.0.3P and 2.0.5P, follow these steps:

Step 1

Open Megaphone.

Step 2

Choose Preferences from the File menu

Step 3

Choose "Incoming Calls" from the Topic: pop-up menu.

Step 4

Click on the "Come to Front when Ringing" check-box.
