Power Macintosh 5400: Switching to Ethernet (9/96)

Article Created: 31 May 1996
Article Reviewed/Updated: 20 September 1996

TOPIC ---

I have a Power Macintosh 5400/120 computer which comes with the Apple CS II
Ethernet card pre-installed. Using the Network Software Selector, I have
switched from Open Transport to Classic AppleTalk. However, the Network control
panel does not have an option to switch to EtherTalk. I checked the Extensions
folder and the Apple Ethernet CS II extension is installed. How do I switch to
EtherTalk?

DISCUSSION --

The Apple Ethernet CS II card and software only function under Open Transport.
Under Classic AppleTalk, the Power Macintosh 5400/120 and Power Macintosh 6400
computers cannot switch to Ethertalk. To connect to an Ethernet network using
the Apple Ethernet CS II card and the Power Macintosh 5400/120 or Power
Macintosh 6400, you must switch to Open Transport, restart the computer, and
then use the AppleTalk control panel to switch to Ethernet.
