PC Compatibility Card: Installing in Power Mac 5400/120 (6/96)

Article Created: 04 June 1996

TOPIC --

I am trying to install a 7-inch PC Compatibility card in a Power Macintosh
5400/120. None of the documentation included with either product tells me how to
do this. Can I install the PC Compatibility card into the Power Macintosh
5400/120?

DISCUSSION ---

Yes, you can install the 7-inch PC Compatibility card in the Power Macintosh
5400/120. However, to install the 7-inch PC Compatibility card, you will first
have to remove the Apple External Video Connector from the logic board of the
Power Macintosh 5400/120.

Install the 7-inch PC Compatibility card into the PCI slot and insert the GIMO
card (the small video board that's connected to the DOS card with a ribbon
connector) into the slot previously occupied by the Apple External Video
Connector.

Do not use the audio cables that come with the 7-inch PC Compatibility card for
installation in the Power Macintosh 5400/120. The GIMO connector card also
handles the audio signal.
