Power Macintosh 5400/120: All Software Isn't Installed (6/96)

Article Created: 6 June 1996

TOPIC ---

I recently performed a clean installation of System 7.5.3 Revision 2 on my Power
Macintosh 5400/120. However, it appears that I no longer have the software that
was originally installed. What other software needs to be installed? Is there
any particular order I need to reinstall this software?

DISCUSSION --

Your Power Macintosh 5400/120 computer includes the following pre-installed
software. The items are listed in the same order as the software is installed at
the factory, but you do not need to install the software in any particular
order.

• System 7.5.3 Revision 2
This installer is located on the Apple Macintosh CD: Install System Software:
System 7.5.3 installation (alias).

• Apple Video Player
This installer is located on the Apple Macintosh CD: Apple Extras: TV/FM
Software: Install Video Software.

This installer places both the Apple Video Player and the Apple FM Radio in the
Apple Menu Items folder. There is not a Custom Install option for this
installer. However, currently the Apple FM Radio does not add any functionality
to your computer so you may safely remove it.

• QuickDraw 3D
This installer is located on the Apple Macintosh CD: Apple Extras: QuickDraw 3D:
Installer.

• QuickDraw 3D Scrapbook
After installing QuickDraw 3D, you will have a Scrapbook file containing two 3D
models in the following location:

Hard Drive: Apple Extras: QuickDraw 3D Folder: Scrapbook file

In order to use this Scrapbook, you need to put it in your System Folder and
replace the Scrapbook file that is currently there.

IMPORTANT: If you replace your current Scrapbook file with the one created by QuickDraw 3D, you will lose any information that you have added. Be sure to copy this information before replacing the file.
