Pwr Mac 7200 & Sys 7.5.3: Sound Amplification Input Ext. (5/96)

Article Created: 13 May 1996

TOPIC -----

I have a Power Macintosh 7200/75 which I recently upgraded to System 7.5.3. Can I use the Sound Amplification Input extension with System 7.5.3? I noticed that it is not included with the Power Macintosh 7200 series computers which have System 7.5.3 pre-installed on them.

DISCUSSION -----

No, the Sound Amplification Input extension is not supported when you are using System 7.5.3. If you are using System 7.5.3 on a Power Macintosh 7200 computer, you should use a microphone which supplies the proper line level voltage, such as the Apple PlainTalk Microphone.

The Tech Info Library article titled "PlainTalk Microphone: Specifications" provides additional information about the specifications of PlainTalk microphones.
