Power Macintosh 7200: EDO Memory Can Damage Logic Board (6/96)

Article Created: 18 June 1996

TOPIC ---

I have a Power Macintosh 7200 series computer, and I would like to use EDO
(Extended Data-Out) memory in my computer because I have heard that it will
provide me with increased performance. Are there any issues I should be aware of
before doing this?

DISCUSSION ---

You cannot use EDO memory in the Power Macintosh 7200 computer. Using EDO memory
in the Power Macintosh 7200 computer can cause damage to the logic board and to
the memory. Because of this, Apple does not support using EDO memory in the
Power Macintosh 7200 computer. Any damage incurred from using EDO memory in the
Power Macintosh 7200 computer may not be covered under Apple Computer's limited
hardware warranty.

The Tech Info Library article, "Macintosh Computers: Using EDO Memory" provides
you with additional information about using EDO memory with other Power
Macintosh computers.
