Power Macintosh and ApplePhone Are Not Compatible (3/94)

```
Article Created: 1 March 1994

TOPIC ----------------------------------------------------------

I just installed the GeoPort Telecom Adapter Express Modem software and
ApplePhone application on my Power Macintosh.  I now get a message that says
it's not supported on this hardware.  Why?

DISCUSSION ------------------------------------------------------

AplePhone accesses the Macintosh 660AV and 840AV computers Digital Signal
Processor (DSP) directly.  The Power Macintosh AV computers do not have a DSP,
resulting in ApplePhone software not running.
