## Power Macintosh: 21-Inch Mono Display Compatibility (10/95)

Article Created: 16 June 1994

Article Reviewed/Updated: 19 October 1995

TOPIC -----

Can the Apple 21-Inch Monochrome Display be used with Power Macintosh systems?

DISCUSSION -----

The Apple 21-inch (2-page) monochrome display (model # M0402 or M1025 -- M0402 is revision A of the 21-inch monochrome display, M1025 is revision B) can be used on Power Macintosh 6100AV, 7100, 7100AV, 8100, and 8100AV series computers with either the HP Video Card (standard video card on the 7100 and 8100) or with the AV Video Card. It is not compatible with the built-in HDI-45 video ports used on these Power Macintosh computers.

The Apple 21-inch monochrome display also works with the Power Macintosh 7200, 7500, 8500, and 9500 series computers.

A DB-15 to DB-25 adapter cable (590-0615) is required with either model. The number of shades of gray that are supported are black and white, 4, 16, and 256.

### Article Change History:

19 Oct 1995 - Added B version model number.

13 Sep 1995 - Added model number.

17 Aug 1995 - Made minor format corrections.
