Power Macintosh:Compatibility With Macintosh Common Lisp (6/96)

Article Created: 14 July 1994
Article Reviewed/Updated: 7 June 1996

TOPIC ---

Is Macintosh Common Lisp (MCL), now a product of Digitool, Inc., compatible with
Power Macintosh computers?

DISCUSSION --

MCL 2.0.1 is partially compatible with Power Macintosh computers, provided a
software patch is installed first and some environmental settings (such as
Virtual Memory) are configured exactly.

MCL 3.0 is compatible with Power Macintosh computers but is again somewhat
dependent on certain configurations, such as whether Virtual Memory is enabled
or disabled.

MCL 3.9 is Power Macintosh native, and is not compatible with non-PPC systems.
All versions of Macintosh Common Lisp prior to 3.9 are 680x0-based applications
and will execute in emulation on a Power Macintosh.

Software patches, patch installation instructions, and further information can
be found at Digitool's web site at http://www.digitool.com or via anonymous ftp
at ftp.digitool.com.

Article Change History:
07 Jun 1996 - Updated article.
28 Feb 1995 - Changed ftp site, and added MCL is a product of DigiTool.
