PCI-Based Power Macintosh Computers: UL Listing? (5/96)

Article Created: 6 May 1996

TOPIC -----

Are the PCI-based Power Macintosh computers UL (Underwriter Laboratories) Listed?

DISCUSSION -----

Apple Computer Inc. uses the testing services of the Canadian Standards Association (CSA). The CSA is recognized by the Occupational Safety and Health Administration (OSHA) as a Nationally Recognized Testing Laboratory (NRTL).

OSHA created a set of standards for approving companies or agencies that do electrical and safety testing. These procedures for certifying a company as an NRTL mean that there can now be more than one source for testing. This allows vendors other than UL to be qualified as OSHA-recognized testing labs.

The insignia for CSA is on the PCI-based Power Macintosh computers, which shows that they are recognized by an NRTL. The /c means that they are also certified for Canada.

Additional information on OSHAs procedures is available on OSHAs web site at <http://www.osha-slc.gov/>.
