## Radius Pivot Displays: Compatibility Information (2/95)

Article Created: 28 February 1995

TOPIC -----

Which Radius Pivot monitors work on the Power Macintosh? Where can I get the latest software? Is it System 7.5 compatible?

DISCUSSION -----

Radius Technical Support states that the Power Macintosh supports the following:

- Radius Precision Color Pivot displays
- Late model Radius Grayscale and Color Pivot displays

The Radius Pivot displays that are not compatible with Macintosh built-in video will not work on Power Macintosh computers, such as:

- Original Black & White SoftPivot (Model 0194)
- ColorPivot LE

For System 7.5 compatibility, customers should use version 3.2 or later of the SoftPivot control panel. The RadiusWare control panel is not System 7.5 compatible. For System 7.5 compatibility, use version 3.2 or later of Dynamic Desktop control panel.

This software is available on the Radius BBS, (408) 541-6190, and on the internet at <ftp.radius.com>.

The Tech Info Library article titled "Locating Vendor Information" can help you search for a particular vendor's address and phone number.
