HyperCard Correction: Globals Retained After Open Command (7/93)

Article Created: 8 July 1993

TOPIC -----

It is written that "When you quit the application you go to the card you were on in HyperCard when you executed the Open command. However, any global variables you had previously declared are now gone, and any portions of handlers that remained unfinished when you executed the open command do not finish."

This is not entirely true.

DISCUSSION -----

Portions of handlers following the Open command will continue to execute in the background. Global variables are retained after quitting an application launched with the Open command.
