AppleShare 1.1 & Srvr 2.0 Limit: Maximum Of 16 Volumes (11/94)

Article Created: 13 July 1988
Article Reviewed/Updated: 21 November 1994

TOPIC ---

Some users are operating large databanks as an AppleShare server. When you
create more than 16 partitions on their databank, you will find that only 16 of
those partitions appear upon accessing AppleShare (V1.1, File Server v2.0).

DISCUSSION --

The reason for this has remained undocumented so far, and there has been some
confusion as to whether this is a Finder problem or an AppleShare problem.

AppleShare v1.1 and AppleShare File Server v2.0 provide access to a MAXIMUM of
16 server volumes. It is NOT a Finder limitation; there is no way around this
limit.
