Macintosh-to-Tandem Connectivity: Distributed Sessions

This article last reviewed: 9 October 1990

TOPIC ---

I need a gateway product to give networked Macintosh computers access to Tandem
computers. Essentially, I am looking for a NetWay 2000-type product for Tandem
computers.

DISCUSSION --

For terminal emulation, TCP/IP and Telnet are available from Tandem.
MacMenlo, from Menlo Business Systems, won't work over TCP/IP, but you can
do TTY with TCP/Connect, from Intercon, or even with NCSA's Telnet.

For message passing, we suggest, in addition to TCP/IP, a MacX25 Server. This
works relatively well.
