3270 Terminal Emulator with Asynchronous IND$FILE Transfer

This article last reviewed: 18 August 1989

TOPIC --

Do you know of an asynchronous 3270 terminal emulator that also supports IBM's
IND$FILE file transfer? Apple's FT/3270 software is a possible solution, but I
want to avoid installing additional host software, if possible.

DISCUSSION --

Avatar's MacMainFrame DX supports asynchronous access to a 3270 mainframe,
and their current release of software supports IND$FILE file transfer.

Tri-Data's Netway 1000, release 6 or later, provides asynchronous access to
IND$FILE.

For more details, search the Tech Info Library under "Tri-Data" and
"Avatar."
